

# Stocks & Investing For New Zealand Families

Investing in stocks doesn't need to be complicated, intimidating, or only for people with big sums of capital. Whether you've just sold property and have cash to allocate, or you're starting small and want to build wealth over time, a thoughtful investing strategy can help you grow your nest egg, generate passive income, and create financial security for your family.

This guide is written for real people — mums, dads, families — who want a practical plan you can understand and apply with confidence.

Our goal isn't just financial freedom. It's freedom of time, choice, and experiences with the people you love most.

## Two Pathways to Investing

### 1 If You're Cashed Up Make Your Money Work for You

Invest a lump sum from selling property, an inheritance, or savings into equities to protect against inflation and generate income through dividends and long-term growth.

#### Where NZ Families Can Invest:

- **moomoo**  
moomoo.com/nz
- **Sharesies**  
sharesies.nz
- **STACKED**  
stackedinvest.com
- **BlackBull**  
blackbullmarkets.com/nz

#### Examples of Blue-Chip Stocks to Consider:

- Alphabet (Google)
- Microsoft
- Apple
- Meta (Facebook)

#### Dividends in Practice Example:

Let's say you hold \$100,000 in dividend-paying stocks with an average yield of 3% per year:

Annual Dividends  
**\$3,000**

Monthly Income Equivalent  
**~\$250**

Reinvest dividends and your portfolio grows faster through compounding.

### 2 If You're Starting Small Build a Nest Egg Over Time

A simple, consistent strategy with small regular contributions can grow into something meaningful.

#### Start With as Little as \$50-\$100 a Week

Use an app like Sharesies or Moomoo to buy fractional shares.

#### How This Works Over Time (Hypothetical)

Assume: \$100 per week • 8% average annual return • Reinvest all dividends

| Time Frame | Total Contributions | Estimated Value (8% avg return) |
|------------|---------------------|---------------------------------|
| 5 Years    | \$26,000            | ~\$32,000+                      |
| 10 Years   | \$52,000            | ~\$78,000+                      |
| 15 Years   | \$78,000            | ~\$148,000+                     |

(These are illustrative figures to help you visualize growth — markets vary year-to-year.)

**Lesson:** Even with a small weekly contribution and a reasonable growth assumption, your portfolio can nearly double over time through compounding.

-  **Passive Income**
-  **Investment Stability**
-  **Keep Money Growing**

## Why This Works for Families

#### 1. It's Structured Rather Than Emotional

Investing small regular amounts removes the fear of timing the market — you buy consistently regardless of price, capturing dips and peaks.

#### 2. It's Flexible

You can:

- Start with as little as \$50/week
- Pause contributions if needed
- Add more when income rises

#### 3. It's Models Financial Fitness for Your Kids

This strategy can be passed down:

- Set up accounts for children
- Teach them about consistency, patience, and compounding
- Their investment grows while they're still young

## Stocks vs ETFs — What's Best?

#### Stocks

- You own pieces of specific companies
- Potential for dividends + capital growth
- More control over your exposure

#### Example Stocks:

#### ETFs (Exchange-Traded Funds)

- Broad exposure to many companies
- Lower risk than a single stock
- Easier to "set and forget"

#### Example ETF:

##### NASDAQ-100 ETF

A fund that owns the largest non-financial companies on the NASDAQ exchange.

**Trade-Off:** ETFs give you broader diversification — good if you just want to grow safely — whereas individual stocks give you control, but require more research.

## How to Get Started Today

1

Open an investing account with Sharesies or Moomoo

2

Link your bank account to deposit weekly automatic contributions

3

Choose a mix of stocks + ETFs

4

Set a schedule (e.g., \$50 every Monday)

5

Reinvest dividends for long-term compounding

6

Review progress every 6-12 months

## Practical Takeaways for Your Family

- You don't need a big starting amount — small, regular contributions grow over time
- Dividend-paying stocks can supplement income once your balance is large enough
- ETFs offer a simple entry with automatic diversification
- Investing can be a shared family habit — and a powerful financial education for your kids
